

## MySQL

---

1. Write a query to join two tables, orders and customers, on the customer\_id column.
2. How would you modify the query to include only orders with a total value greater than 1000 Rs ?
3. Join three tables: orders, customers, and products, on the customer\_id and product\_id columns.
4. Write a query to retrieve the customer name, order date, and product name for all orders.
5. How would you modify the query to exclude customers from a specific country (e.g., USA) ?
6. Join four tables: orders, customers, products, and categories, on the customer\_id, product\_id, and category\_id columns.
7. Write a query to retrieve the category name, product name, order date, and customer name for all orders.
8. How would you modify the query to include only orders from a specific date range (e.g., last 30 days) ?
